Easy Ag® Adhesive Strips

Directions for Home Use

Adhesive Strip Application Instructions

1. Select an *Easy Ag® Adhesive Strip*, sized to fit over the wound, laceration, burn, bite or rash. Moisten the silver pad with drinkable water and center the silver pad over the wound, overlapping all sides if possible.
2. Rinse or moisten the *Easy Ag® Adhesive Strip* daily, using drinkable water. If your caregiver gave you saline or sterile water, use it to rinse your wound and not for the dressing. You may bathe or shower with the dressing on.
3. The *Easy Ag® Adhesive Strip* should last for up to **7** days if kept clean and moist, and may be secured with additional medical tape if necessary.

Do not remove the Easy Ag® Adhesive Strip while dry or if the Easy Ag® Adhesive Strip is sticking. If sticking occurs, rewet and saturate the Easy Ag® Adhesive Strip waiting until it can easily be removed. If problems occur, including swelling, severe redness or sharply increased pain, contact your physician.

Optional: If you have a more serious or larger area to cover, please consider purchasing our [Wound Contact Dressings](#). Overlapping the wound by ¼" on all sides dramatically improves results.

General Considerations During Use

1. Daily soaking and spraying with wound cleansers may increase the efficiency of cellular debris removal and extend the life of all *Easy Ag*[®] products.
2. Remove *Easy Ag*[®] prior to MRI procedures.
